WORK EXPERIENCES

BINANCE(2025/9~)

- **AI Software Engineer**
 - Multi-Modal Agentic AI System (MCP, ADK, A2A, LangGraph, LangSmith, etc.)
 - ADK/A2A development, focusing on sub-agent design and orchestration.
 - InfraBot: An orchestration system across multiple platforms(HTTP/HTTPS API, A2A endpoints, internal chatroom system, etc.) to form a universal multi-agent system.
 - Agent-Runtime: Internal agent factory for instant AI Agents deployment.
 - OpenClaw observability with Opik Tracing
 - Introduces Opik and enhanced OpenClaw tracing for each main-agent run by implementing span-tree to bind the relationships between main agent, sub-agent, tool-calls, etc.

DELTA ELECTRONICS(2024/11~2025/9)

- **Associate Researcher, Agentic AI Team Leader**
 - LLM/VLM training and deploying (Python, PyTorch, HuggingFace, vLLM)
 - Multi-Modal Agentic AI System (MCP,ADK, A2A, Nemo-Agent-Toolkit, AutoGen, LangGraph, etc.)
 - Model Context Protocol(MCP) Based Agentic AI System.
 - Office Automation with AI/LLM.
 - Agentic AI Ecosystem within Delta Electronics.

RESEARCH CENTER FOR INFORMATION TECHNOLOGY INNOVATION,ACADEMIA SINICA (2024/7~2024/10)

- **Research Assistant**
 - 3D Gaussian Splatting and 4D Real time Dynamic Scene Rendering.

TAIWAN MOBILE - MACHINE LEARNING ENGINEER (2022/9~2023/7)

- **eKYC Project**
 - Computer Vision and Deep Learning Based Method for Face and ID Card recognition.

EDUCATIONS

NATIONAL TAIWAN UNIVERSITY GRADUATE INSTITUTE OF COMMUNICATION ENGINEERING MASTER OF SCIENCE AND ACADEMIA SINICA (2023/3~2024/7)

- **Graduate Student Researcher at Research Center for Information Technology Innovation, Academia Sinica**
 - Worked under Prof. Jun-Cheng Chen.
- **Related Courses**
 - Artificial Intelligence
 - Machine Learning
 - Generative AI
 - Trustworthy AI

NATIONAL TAIWAN UNIVERSITY ELECTRICAL ENGINEERING BACHELOR OF SCIENCE (2018/9~2022/6)

- **Undergraduate Research Fellow at Vision and Learning Lab**
 - Worked under Prof. Yu-Chiang Frank Wang.
- **Related Courses**
 - Computer Vision
 - Deep Learning and Computer Vision
- **Extracurricular Activities**
 - Leader of the Martial Arts School Team
- **Language Abilities**
 - Fluent in English

- TOEIC Score: 960

PUBLICATIONS

PROJECTS

3D COMPUTER VISION RELATED PROJECTS

- **4D Real-Time Dynamic Scene Rendering with Gaussian Splattings (Python, PyTorch, CUDA)**
 - Novel View synthesis with key emphasizes:
 - Photorealistic Quality
 - Real-time rendering (High FPS)
 - Rapid Convergence Speed
 - Low Computational Effort
 - Introduced Neural Voxels to encode 3D Gaussians and K-Plane modules to reinforce the deformation of Gaussians.
 - Achieved State of the Art performance with lower memory consumption and training/inferencing time.
- **4D Surface Reconstruction with Neural SDF and Gaussian Splattings (Python, PyTorch, CUDA)**
 - Downstream task based on 4D Real-Time Dynamic Scene Rendering with Gaussian Splattings
 - Introduced Signed Distance Function(SDF) to Dynamic Scene Renderings
 - Combined depth map rendered from Gaussians and ray tracing techniques to reconstruct surfaces.
 - Introduced mutual supervision between RGB image and SDF on a dual branch architecture.
- **Surface Reconstruction and Mesh Extraction with 3D Gaussian Splattings. (Python, PyTorch,CUDA)**
 - Introduced Signed Distance Function(SDF) to 3D Gaussian Splattings.
 - Dual branch training with SDF-Head and RGB-Head to reconstruct 3D geometry.
- **Semantic Scene Completion (Python, PyTorch)**
 - Semantic Scene Completion task on 3D outdoor point cloud (semanticKITTI)
 - Introduced a Scene-Instance-Scene method to help with datasets inconsistencies on 3D point clouds.
 - Utilized a compact scene completion model for initialization, a panoptic segmentation model for instance proposal and several tiny instance completion models for instance reconstruction.

2D COMPUTER VISION RELATED PROJECTS

- **Face Presentation Attack Detection (Python, OpenCV, Scikit-learn, PyTorch)**
 - Ensembled SwinV2-s, EfficientNet-s, RegNet as backbone with multi-head classifier structure.
 - Cross validation combined with ensemble model to prevent overfitting and to achieve higher accuracy.
 - Achieved 99.97% accuracy on Celeb-A Spoof dataset
- **One Class Fake ID Detection (Python, PyTorch, HuggingFace)**
 - Fake ID detection with only true ID Cards.
 - Combined Segment Anything Model to mix match different faces on the IDs to create fake IDs.
 - Cross validation combined with ensemble model to prevent overfitting and to achieve higher accuracy.
- **Anti-Counterfeiting label detection (Python, OpenCV)**
 - Detect holograms on National ID Cards by analyzing the Hue distribution with user instructions.
 - With the video input and several thresholds, we were able to classify if the ID has an Anti-Counterfeiting label.
- **Light Weight Face Detection (Python, PyTorch)**
 - Combining Inverted Residual, FPN(Feature Pyramid Network), SSH(Single Stage Headless Face Detector) and DCN(Deformable Convolution Network) for light weight face detection on 2D pictures.
 - Achieved Precision Score 80.82 and NME of 6.25 with model size limited to 5MB.
- **Face-Anti-Spoofing (Python, PyTorch)**
 - Predict if the face is spoofed within the 11 frames of image input of the same person.
 - Uses MobileNetV2 as CNN pre-trained backbone with Bidirectional LSTM as RNN for sequential modeling.

- Achieved 99.3% accuracy on Oulu-NPU and SiW dataset

SIDE PROJECTS

- **Peng-Hu VR Project (Unity, C#, Android Studio)**
 - VR-based first-person shooter in the beautiful landscape of Peng-Hu.
 - With limited hardware and Google Cardboard, we created a 15 mins game for Peng-Hu.
 - A 3D model of the islands, lava, and other features of the game was developed

SKILL SETS

Python 、 PyTorch 、 Hugging-Face 、 OpenCV 、 CUDA 、 Scikit-Learn 、 Unity 、 C# 、 Android Studio
